SMART TRIP BUILDER

MEETING 1 — MINUTES

Meeting Number	1
Date	19 / 10 / 2026
Time	7:30 pm
Location	WhatsApp
Minutes prepared By	Student 1 → Tala Alkhwaiter

Attendance

Present	5
Absent	0

Discussion Summary

1. Project Idea

We discussed Smart Trip Builder, a website that helps users create personalized travel itineraries based on their budget, interests, trip duration, and preferred travel pace.

2. Problem Statement

We identified that planning a trip takes time and effort, especially when travelers need to balance their budget, interests, and trip duration. Our system aims to solve this problem by automatically generating a suitable itinerary based on the user's preferences and budget.

3. Target Users

Our target users are travelers in general, especially those who find trip planning difficult, such as families. The website will help them organize their trips more easily.

4. Approved Features

We discussed the following features:

- Experience Cards: Users select their preferred types of experiences.
- Automatic Travel Style: The system determines the user's travel style based on their selected Experience Cards.
- Travel Pace: Users choose Chill, Balanced, or Packed.
- Build My Trip: The system generates a day-by-day itinerary.
- Budget Balance: Users can view their estimated expenses and remaining budget.
- Swap / Keep: Users can replace activities or tourist attractions they dislike and keep their favorite ones, while staying within their planned budget.
- Balanced Activity Distribution: The system distributes activities across the trip to provide variety, such as relaxation on one day and more active experiences on another.
- Trip DNA and Trip Snapshot: The system provides a visual summary of the itinerary and a final trip overview.

5. Scope and Limitations

We discussed initially supporting selected destinations, such as Paris, Bali, Tokyo, and a Saudi destination like AlUla. We will prepare predefined activities and estimated costs for the selected destinations. More destinations could be added in the future. The project will not include actual flight or hotel bookings, online payments, live maps, real-time prices, or advanced AI-based planning.

Decisions Made

1- We agreed on the main idea of Smart Trip Builder.
2- We discussed the problem statement and target users.
3- We discussed the main features, including automatic Travel Style identification, Swap / Keep, and balanced activity distribution.
4- We discussed limiting the initial scope to selected destinations.

Action Items

Task	Assigned to	Due date
Complete Meeting 1 documentation	Tala Alkhwaiter	Before meeting 2
Create the GitHub repository	Jory Albuhairi	Before meeting 2
Prepare the meeting templates	Tala Alkhwaiter	Before meeting 2
Start working on the assigned Part B and Part C tasks	All members	After meeting 2

Next Meeting:

we will discuss software process models, distribute the principles in Part B among team members, and set the deadlines for submitting the SRS and SDD documents.
